

When you need more than just a PC

With over twenty five years of experience in computing, we understand the need of computational power and the role of computing in gaining advantage in science, research, and technology development. High computational capacity is needed not only for business applications, or ambitions, but also to test and produce new ideas, and effectively validate deployment and integration of the new ideas and new technology.

Custom built hardware

We position our services in the area where you need compute power, but the market does not offer you a good fit for your needs for reasonable price. We have been in the same situation for several decades. Off-the shelf products can be technologically obsolete, or overpriced, late to market, and locked into the vendor's ecosystem. We offer the solution to those concerns : latest technologies, reasonable pricing, custom built configurations, proven compatibility with multiple vendors, outstanding performance, and life-time support.

Pre-installed and validated software

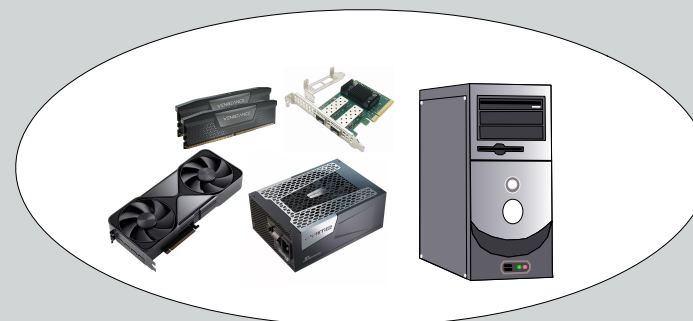

Hardware systems built by Mouseclick Technologies are compatible with wide range of operating systems and software products. We help you to choose and configure hardware and software components to guarantee integration with other systems of your choice. Specialised hardware may be required for tasks using artificial intelligence, for CAD, for data processing, for biochemistry, folding proteins and DNA analysis, in each case software choice must be aligned with the hardware configuration, to eliminate arbitrary bottlenecks that may occur. We take responsibility for building optimal hardware and software configurations for your applications.

Certified for major OS and frameworks

Our OEM hardware is validated for Windows Server 2022, 2025, Ubuntu 24.04, Nvidia CUDA and DOCA, whichever is applicable for the requested configuration. List can be extended based on your requirements.

Support, maintenance, migration and upgrade

We offer maintenance, support, data and system recovery services, so that your safe passage is guaranteed for the whole duration of business lifetime of the systems – from purchase to decommissioning and media destruction. We commit to providing highest quality services at competitive prices throughout complete life cycle of your projects and systems.

Pricing and financing

With preference on custom-building approach, we also offer pre-build systems from leading vendors: Dell, HP, Lenovo. We also provide post-market system modifications and upgrades, delivering latest technologies combined with maintenance and support services and flexible financing, all throughout full system lifecycle. If you recognise possible benefits of car leasing, you will surely appreciate the benefits of workstation leasing, and indeed sometimes cost of a high-performance workstation may end up in a similar price range. Leasing an HPC workstation deserves careful analysis of your business needs - please don't hesitate to contact us directly.

Workstation leasing services

Here is how it works:

- ① You bring us your requirements, we make you an offer
- ② We engage with the leasing company to prepare the lease
- ③ You sign the lease and the leasing company makes a purchase
- ④ We build and deliver your systems under the terms of service

The value of flexibility

Flexibility of choice is the key to spending efficiently

- Using most recent technology
- Shorter time to market
- Reducing total cost of ownership
- Fast response to market changes and business needs
- Efficient research and development

Choose only the options you need

To stay on the front edge of innovation in your own domain, you don't need a super-ultra-everything, even if you need to have it at superior level. Certain tasks may rely on vast amounts of RAM, CPU core count, physical connectivity, GPU, DPU, NPU, etc. Some tasks may require specialised hardware and interface integration. Custom built workstations offer unparalleled freedom of choice and flexibility on demand.

Advantages of leasing

	Prebuilt PC	Server in DC	Cloud Instance	Leasing
Features	Limited	Unlimited	Limited	Unlimited
Performance	Mediocre	Limited by design	Unlimited by design	Limited by design (*)
Capacity	Limited	Very high	Unlimited by design	Very high (*)
Life Cycle	Inception to Obsolescence	Inception to Obsolescence	On demande	On demande
Cost type	CAPEX	CAPEX, OPEX	OPEX	OPEX
Cost	Controlled	High overhead	High overhead	Controlled
Efficiency	Mediocre	Medium-High	Medium-High	Very high (**)
Flexibility	Low	Medium-High	Medium-High	Very high (**)
Privacy	High	Controlled	Controlled	High

(*) Workstation capacity and performance are “limited by design” is a reference to a fact that workstation cannot replace a whole data centre, even though it is sufficient for many compute tasks, including efficiently running a small, virtualised datacentre, if the resources are adequate. Features are unlimited, even though you may need to build another workstation for another set of features.

(**) Efficiency and flexibility of a workstation compared to a PC are “very high” mostly due to much higher capacity and performance, and compared to the shared infrastructure solution, due to much lower infrastructure and organisational dependency.
